3. (canceled)
4. (canceled)
5. (canceled)
6. (currently amended) A system for providing an extended electronic program guide, comprising:

at least one recorded material database containing user-initiated recorded material that includes at least one of: recorded video streams, still images, recorded audio stream and recorded closed captioning information.

at least one live stream database containing at least information regarding at least one of: a current live stream and a future live stream; and

a database integrator that produces for display the extended electronic program guide, the database integrator operatively connected to the at least one recorded material database and the at least one live stream database, the extended electronic program guide including information related to the recorded material and information related to the at least one of: [[a]]the current live stream and [[a]]the future live stream.

7. (original) The system according to claim 6, wherein the recorded material is time shifted data of predetermined live stream data.

8. (original) The system according to claim 6, wherein the recorded material is material derived from a source of digital data.

9. (original) The system according to claim 6, wherein respective recorded material of a plurality of recorded materials is derived from a respective source of digital data of a plurality of digital data.

10. (previously presented) The system according to claim 6, wherein the at least one recorded material database includes data related to predetermined recorded material, identification data, and optionally, at least one of data representing: time recorded, time duration, actors/actresses, rating, and password.

11. (currently amended) A system for providing an extended electronic program guide, comprising:

a plurality of local digital material databases of digital recorded material that includes at least one of: recorded video streams, still images, recorded audio stream and recorded closed captioning information; and

a database integrator operatively connected to the plurality of digital material databases, the integrator producing an extended electronic program guide for display from the plurality of digital material databases.

12. (original) The system according to claim 11, wherein the digital material is recorded material that is time shifted data of predetermined live stream data.

13. (currently amended) The system according to claim 11, wherein the digital material database includes, for predetermined stored recorded material data, identification data, and at least one of data ~~representing~~ representing: time recorded, time duration, actors/actresses, rating, and password.

14. (canceled)

15. (currently amended) The system according to claim 6, wherein the information regarding at least one of: ~~[[a]]the~~ current live stream and ~~[[a]]the~~ future live stream correspondingly includes at least one of: identification of the current live stream and identification of the future live stream, and the information related to recorded material includes identification of the recorded material.

16. (currently amended) A method for providing an extended electronic program guide, comprising:

generating at least one recorded material database containing recorded material that includes at least time shifted data of predetermined live stream data~~one of: recorded video streams, still images, recorded audio stream and recorded closed captioning information;~~

processing at least one of a current and a future live stream to obtain data regarding the at least one of ~~[[a]]the~~ current and ~~[[a]]the~~ future live stream; and

producing, for display, the extended electronic program guide by integrating data regarding the at least one of ~~[[a]]the~~ current live stream and ~~[[a]]the~~ future live stream with data from the at least one recorded material database, the extended electronic program guide including displayed information related to the recorded material and information regarding the at least one of ~~[[a]]the~~ current live stream and ~~[[a]]the~~ future live stream.

17. (previously presented) The method according to claim 16, wherein the at least one recorded material database includes, for predetermined recorded material, identification data, and optionally, at least one of time recorded, time duration, actors/actresses, rating, and password.

18. (currently amended) The method according to claim 16, wherein the data regarding the at least one of ~~[[a]]the~~ current and ~~[[a]]the~~ future live stream includes correspondingly at least one of identification of the current live stream and identification of the future live stream, and the information related to recorded material includes identification of the recorded material.

19. (currently amended) A system for providing an extended electronic program guide, comprising:

at least one recorded material database containing recorded material that includes at least time shifted data of predetermined live stream data~~one of: recorded video streams, still images, recorded audio stream and recorded closed captioning information~~; and

a database integrator receiving at least one of a current and a future live stream and producing the extended electronic program guide, the database integrator operatively connected to the at least one recorded material database and the at least one of ~~[[a]]the~~ current and ~~[[a]]the~~ future live stream, the extended electronic program guide including displayed information related to the ~~[[past ]]~~recorded material and displayed information regarding the at least one of ~~[[a]]the~~ current and ~~[[a]]the~~ future live stream.

20. (previously presented) The system according to claim 19, wherein the recorded material database includes data representing predetermined recorded material, identification data, and optionally, at least one of time recorded, time duration, actors/actresses, rating, and password.

21. (currently amended) The system according to claim 19, wherein the information regarding the at least one of [[a]]the current and [[a]]the future live stream includes correspondingly at least one of an identification of the current live stream and an identification of the future live stream, and the information related to recorded material includes identification of the recorded material.

22. (currently amended) A method for providing and displaying an extended electronic program guide, comprising:

generating at least one recorded material database containing user-initiated recorded material that includes at least one of: recorded video streams, still images, recorded audio stream and recorded closed captioning information;

generating at least one live stream database containing at least information regarding at least one of a current live stream and a future live stream;

producing, for display, the extended electronic program guide by integrating data from the at least one of: the live stream database and the pre-generated database, with data from the at least one recorded material database, the extended electronic program guide including information related to the recorded material and information regarding the at least one of: [[a]]the current and [[a]]the future live stream; and

displaying the extended electronic program guide wherein information related to the recorded material is displayed with information regarding the at least one of [[a]]the current and [[a]]the future live stream, the information regarding the at least one of [[a]]the current and [[a]]the future live stream including correspondingly at least one of: identification of the current live stream and identification of the future live stream, and the information related to the recorded material including identification of the recorded material.

23. (previously presented) The method according to claim 22, wherein displaying the extended electronic program guide displays a grid of entries, the entries ordered by time, each of the entries indicating presence of existent recorded material when available and associated to the entry.

24. (currently amended) A system for providing and displaying an extended electronic program guide, comprising:

at least one recorded material database containing user-initiated recorded material that includes at least one of: recorded video streams, still images, recorded audio stream and recorded closed captioning information;

at least one live stream database containing at least information regarding at least one of a current and a future live stream;

a database integrator operatively connected to the at least one recorded material database and the at least one live stream database, the database integrator integrating data from the at least one recorded material database with data from the at least one live stream database to produce, for display, the extended electronic program guide; and

the extended electronic program guide including information related to the recorded material and information regarding the at least one of ~~[[a]]the~~ current and ~~[[a]]the~~ future live stream, the information regarding the at least one of ~~[[a]]the~~ current and ~~[[a]]the~~ future live stream including correspondingly at least one of an identification of the current live stream and an identification of the future live stream, the information related to the recorded material including identification of the recorded material.

25. (previously presented) The system according to claim 24, wherein the extended electronic program guide is organized as a grid of entries, the entries ordered by time, each of the entries indicating presence of existent recorded material when available and associated to the entry.

26. (currently amended) A method for providing an extended electronic program guide, comprising:

generating at least one recorded material database containing at least information related to user-initiated recorded material wherein the recorded material includes at least one of: recorded video streams, recorded still images, recorded audio streams, and recorded closed captioning information;

generating at least one live stream database containing at least information regarding at least one of: a current and a future live stream, or using at least one existent, pre-generated database, with a known format, containing at least information regarding at least one of: [[a]]the current and [[a]]the future live stream; and

producing, for display, the extended electronic program guide by integrating data from the at least one of: the live stream database and the pre-generated database, with data from the at least one recorded material database, the extended electronic program guide including information related to the recorded material and information regarding the at least one of: [[a]]the current and [[a]]the future live stream.

27. (canceled)

28. (previously presented) The method according to claim 26, wherein the recorded material is material derived from a source of digital data.

29. (previously presented) The method according to claim 26, wherein respective recorded material of a plurality of recorded materials is derived from a respective source of digital data of a plurality of digital data.

30. (previously presented) The method according to claim 26, wherein the recorded material database includes data related to predetermined recorded material, identification data, and optionally at least one of: time recorded, time duration, actors/actresses, rating, and password.

31. (currently amended) The method according to claim 26, wherein the information regarding at least one of: ~~[[a]]the~~ current and ~~[[a]]the~~ future live stream includes correspondingly at least one of: an identification of the current live stream and an identification of the future live stream, and the information related to recorded material includes identification of the recorded material.

32. (new) A system for providing an extended electronic program guide, comprising:  
at least one local recorded material database containing recorded material; and  
a database integrator that produces for display the extended electronic program guide, wherein the extended electronic program guide includes at least information related to the recorded material.

33. (new) The system of claim 32, wherein the recorded material includes time shifted data of predetermined live stream data.

34. (new) A method for providing an extended electronic program guide, comprising:  
generating at least one local recorded material database containing recorded material; and  
producing, for display, the extended electronic program guide, wherein the extended electronic program guide includes at least information related to the recorded material.

35. (new) The method of claim 34, wherein the recorded material includes time shifted data of predetermined live stream data.
